

# PRODUCT BASED TRAINING

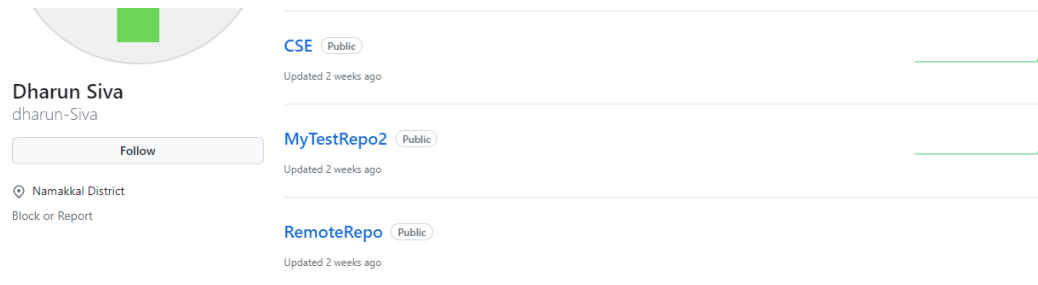

## EXERCISE 3

**NAME** : KABİYASHWANTH V

**REG NO** : 73772114150

**DEPT** : BE CSE

## 1.First, one person in the group should create a public repository using their GitHub account.

## 2.This same person should then follow the instructions from GitHub to add a remote, and then push their repository. Do not forget the –u flag, as suggested by GitHub!

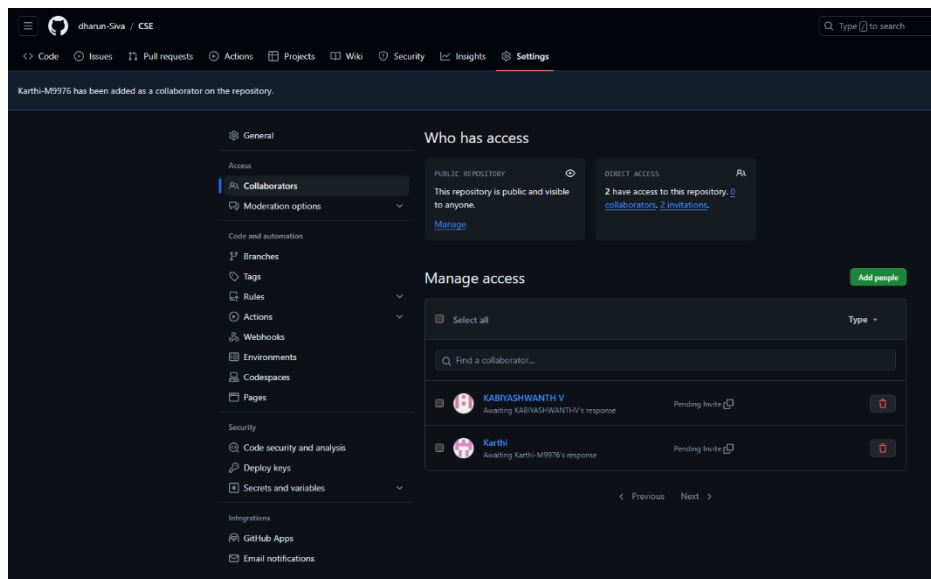

```
Git CMD
D:\73772114128\cse\local>git branch
D:\73772114128\cse\local>git status
On branch main

 * [new branch]      main -> main
branch 'main' set up to track 'origin/main'.
```

**3.All of the other members of the group should then be added as collaborators, so they can commit to the repository also.**

**4.Next, everyone else in the group should clone the repository from GitHub. Verify that the context of the repository is what is expected.**

```
D:\73772114150\csekabi>git clone https://github.com/dharun-Siva/CSE.git
Cloning into 'CSE'...

Receiving objects: 100% (3/3), done.
```

**5.One of the group members who just cloned should now make a local commit, then push it. Everyone should verify that when they pull, that commit is added to their local repository**

```
D:\73772114150\csekabi\CSE>git status

Your branch is up to date with 'origin/main'.

Changes not staged for commit:
  (use "git add <file>..." to update what will be committed)
  (use "git restore <file>..." to discard changes in working directory)
        modified:   cse.txt

no changes added to commit (use "git add" and/or "git commit -a")
```

```
D:\73772114150\csekabi\CSE>git add cse.txt
